Zukunft mit System

Your general contractor for intra-logistics and automation

The entire service portfolio by
Ansorix guarantees flexible, scalable
and specific solutions

On the path towards your individual logistics solution, we offer you comprehensive consultancy with the aim of achieving an ideal level of automation.

- Process optimisation
- Increase of efficiency
- Improvement of competitiveness
- Bespoke and sustainable solutions
- System-independent

As a general contractor for intra-logistics and automation, we develop optimal individual solutions. Furthermore, we translate complex customer requirements into precise offers and services.

We provide everything with a one-stop service: from well-informed consultancy and evaluation of new logistics concepts to design, production and commissioning of the facilities, and also comprehensive documentation, training and customer support.

The full spectrum for efficient processes with system

Software for complex processes

System control

We implement individual control concepts based on industrially reliable and failsafe PLC solutions.

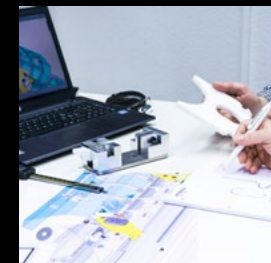

Warehouse management software

The warehouse management system of our long-standing partner Logway Informatik AG includes extensive functions ranging from the incoming goods via commissioning to the outgoing goods – optimised for various sectors.

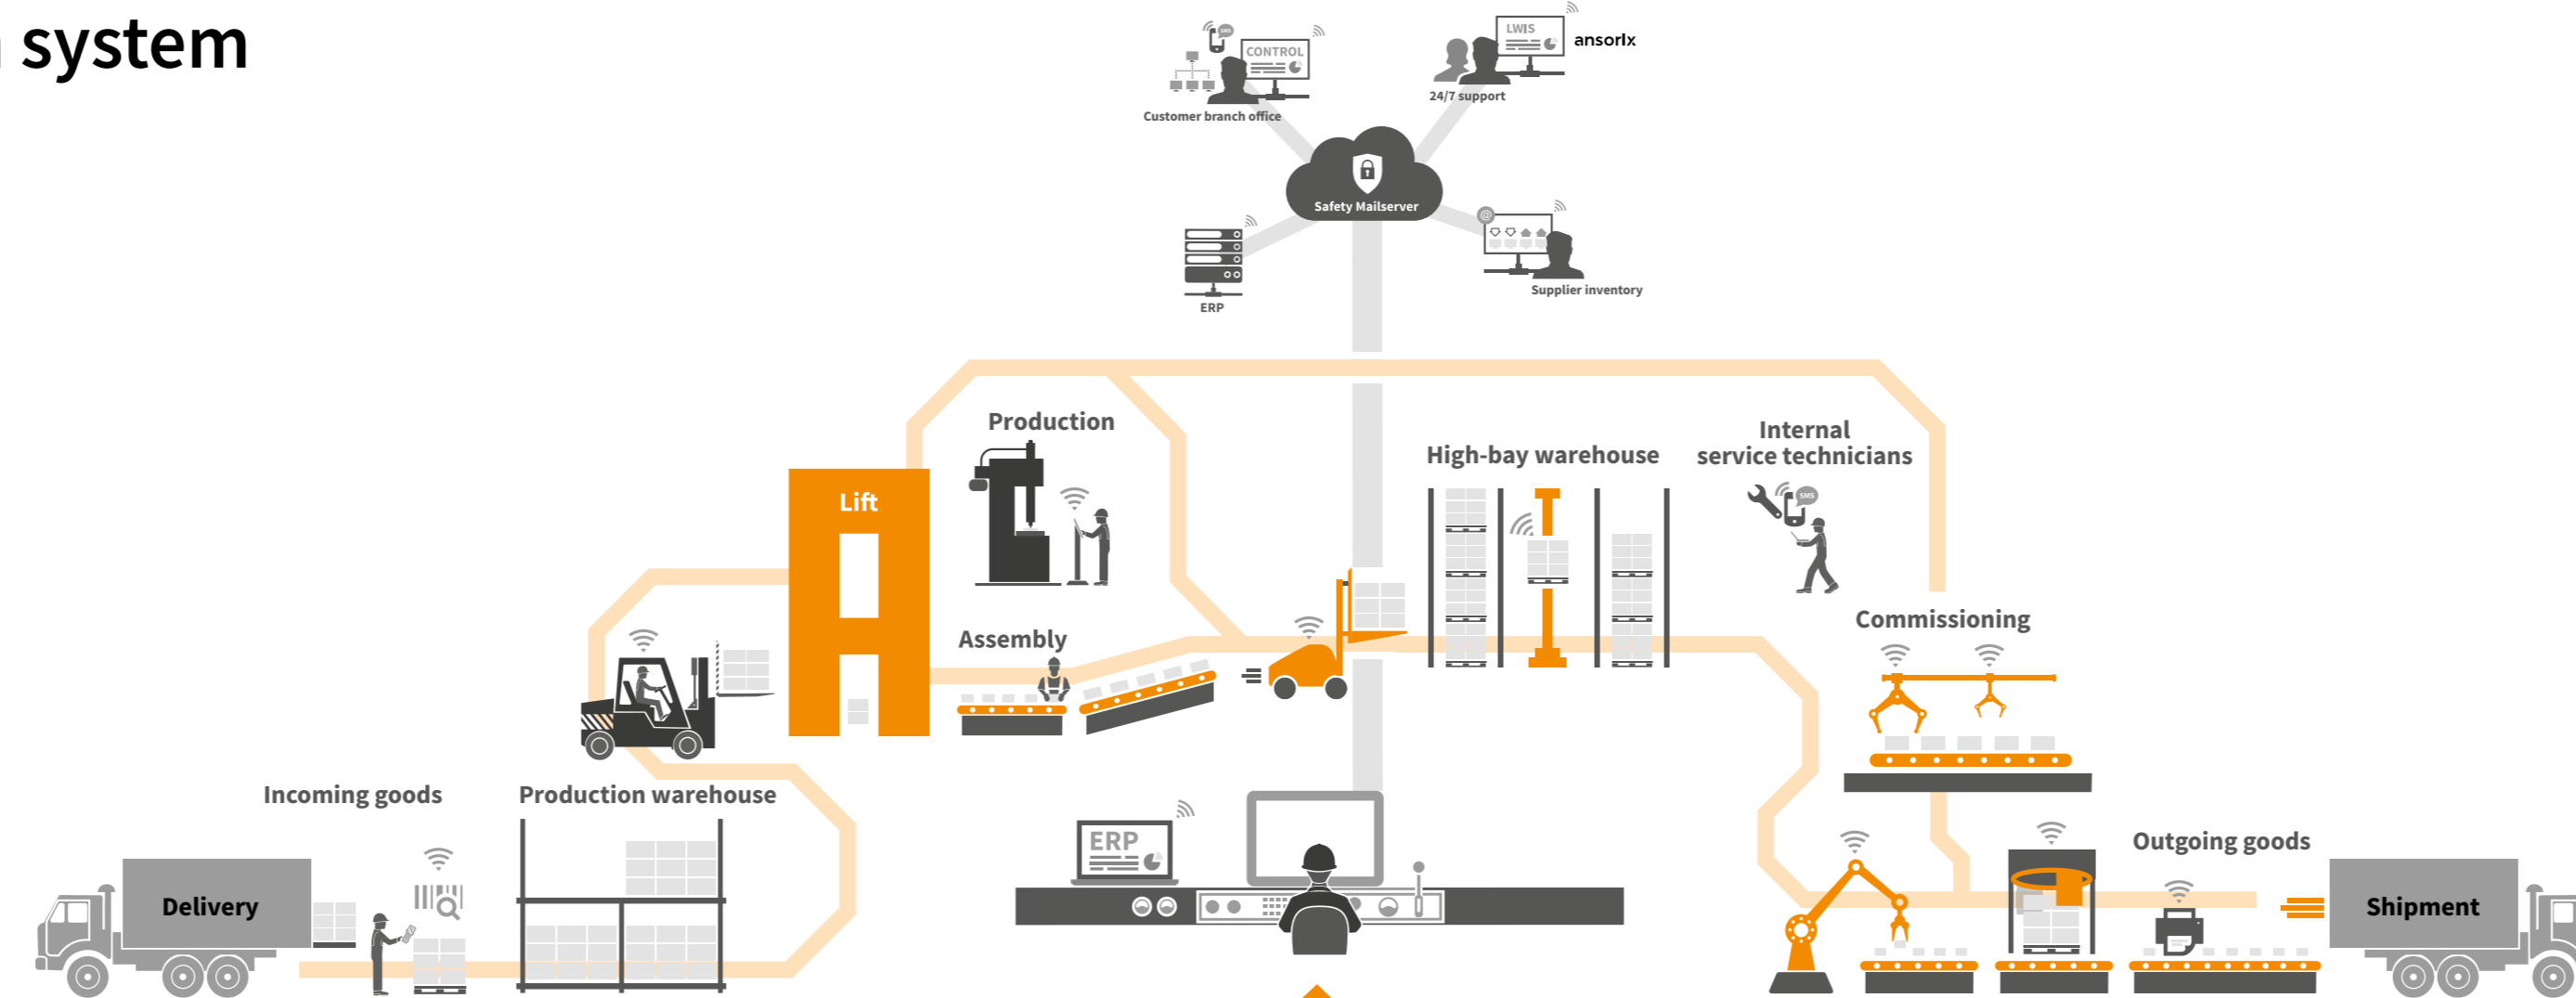

Material flow software

Where is a product at any given moment in time? Thanks to our material flow software which can trace products at any time, this question has become a thing of the past.

Engineering practical solutions

We support you during the planning and implementation stages of new and complex special machinery. With our products, you are able to overcome technological challenges and thus optimise your internal processes with regard to production, assembly and logistics.

Systems for individual intra-logistics

Conveying

Our wide range of products offers many possibilities to optimise your material flow. We not only convey all kinds of standard load carriers such as containers, pallets, boards and roll containers, but also heavy duty applications and special load carriers.

Handling

Leave it to our automated handling processes to take care of recurring tasks. Our palletising and depalletising stations, shuttles, stacking and separation units as well as industrial and gantry robots all meet your requirements.

Storage

By using storage racks, storage and retrieval machines as well as small parts storage units, we optimise your material maintenance and storage. This way, we help you to rationalise your storage processes in a sustainable manner.

Transport

Automated guided vehicles enable you to create a flexible and scalable flow of materials and goods. Automated stackers and multi-platforms offer the right solution for every task.

Special machinery

With our expertise in the field of special machinery, we are able to solve non-standard customer-specific tasks. These solutions mainly come into effect during the development of operating and production equipment.

Services ensure peak performances

Retrofit

Increased wear and tear as well as failure of individual components, detachment of subsystems in operation and modified safety requirements call for modernisation of existing logistics facilities which we implement for you according to current standards.

Maintenance, repairs, spare parts

We guarantee a very high availability and an exceedingly high level of professional maintenance that is performed by our service and maintenance team on site. Thanks to our workshop facilities, we are capable of manufacturing spare parts at short notice and as required.

Support

Depending on your individual requirements, we offer you an Assistance Agreement, adequate telephone support, remote access and, if necessary, even on-site deployment. Furthermore, we also offer to store your spare parts.

Training

As the supplier of your facility, we offer you system-specific training, including documentation.

MTO and ATO production

As your flexible and efficient partner for Make To Order and Assemble To Order production, we have the necessary technologies for mechanical manufacturing, laser processing, sheet metal forming, welding operations, and surface treatments.

Assembly production

Thanks to our competencies in assembly production, we are your specialists when it comes to manufacturing, installation and commissioning of assemblies.

Solving demanding tasks is our common goal

As experts for mechanical components and control systems, we are the suitable partner for implementing standard solutions as well as complex and demanding projects. We augment mechanical solutions in the field of classical conveying technology with customer-specific adaptations of standard elements.

Our competencies in special machinery construction allow us to develop completely new facilities and system elements which guarantee an optimal material flow.

Flexible and future-oriented control concepts as well as the proven warehouse management and material

flow software round off our range of services. Hence, we cleverly use the available data and ensure a continuous material flow.

Our services include retrofitting existing facilities, our competent and customer-oriented support as well as regular maintenance work including spare parts.

Furthermore, we are a flexible partner for Make To Order and Assemble To Order production. Due to our modern machinery, we are always capable of accurately manufacturing our customers' product models.
